

Industrial Hygiene Services

We can help you manage the ongoing and increasing federal and state regulations to help improve workplace safety and health. Whether it is directives or recommendations from OSHA, NIOSH, or state regulatory agencies, CSERT has the personnel and expertise in addressing your needs and in implementing safe work environment improvements.

CSERT has personnel with over 25 years of experience who can help you to understand the safety and industrial hygiene regulations impacting your business. We can evaluate your compliance, recommend engineering and work practice controls, put in place required documentation and reporting systems – all of which can help reduce the risk of injury and illness and meet regulatory requirements.

INDUSTRIAL HYGIENE SERVICES

Our staff of trained professionals can perform site assessments, quantitative hazard measurement, develop compliance programs, and evaluate program management in order to reduce the potential for risk and injury.

Air Monitoring

Air monitoring for toxic dusts and vapors can be performed to: determine if engineering controls are working, evaluate odor or indoor air quality complaints, and assist you in selecting personal protective equipment for the hazards identified. Whether it's on industrial or construction worksites or in office settings, CSERT can help provide recommendations for hazard reduction, training, support, guidance, and updates in order to minimize or eliminate occupational health concerns.

Respiratory Protection Fit Testing

Respiratory protection fit testing services are a critical component of a fully rounded protection program. CSERT can provide fit testing services at your worksite.

Noise Monitoring

Noise monitoring can be conducted to: quantify noise level exposures, reduce the potential for hearing loss, provide the basis for hearing protection and engineering noise control efforts, and satisfy OSHA hazard evaluation requirements. Annual hearing conservation training can also be supplied to complement hearing conservation program requirements.

SUMMARY OF SERVICES

- On-site industrial hygiene surveys
- Sound level (noise) surveys
- Toxic chemical monitoring
- Customized safety and health training
- Indoor air quality surveys
- Ergonomics evaluations
- Bloodborne pathogens plans and training
- Safety and health program development
- Respiratory protection programs
- Ventilation system assessments
- Air contaminant monitoring
- Heat stress monitoring
- Chemical hygiene plans
- Personal protective equipment (PPE) evaluations
- Employee exposure monitoring
- Laboratory safety evaluations
- Health and safety program auditing
- Occupational illness investigations
- Right – to – know surveys
- Safety bulletins
- Facility material inventory services, MSDS and label development
